Enterprise Tier:

1. **OneTrust ₹75L–₹2Cr+/yr**

   Market leader · 14,000+ enterprise customers · $5.3B valuation

   The industry gold standard for privacy compliance. Covers consent management, data subject access requests (DSAR), data mapping, DPIA workflows, and vendor risk. Built entirely around GDPR and CCPA.

   Has a DPDP module but it's a thin wrapper, no India-law-specific scanning or DPDP section mapping.

   Consent management
   Data mapping
   DSAR automation
   Vendor risk
   No code scanning
   No DPDP-native
   Enterprise-only pricing

2. **Securiti.ai ₹75L+/yr**

   AI-driven · Multi-cloud · $156M raised

   Positions itself as an AI-native data intelligence platform. Does automated data flow mapping across cloud environments, consent management, DSAR, and breach notification. Strong on multi-cloud discovery. No source code scanning, no DPDP-specific section mapping, no Indian SME pricing.

   AI data mapping
   Multi-cloud discovery
   DSARNo code scanning
   No DPDP-specific
   Enterprise-only

3. **BigID ₹50L+/yr**

   Data discovery specialist · $306M raised · $100M ARR

   Best-in-class for discovering PII across massive structured and unstructured data estates. Uses ML to classify sensitive data across 200+ integrations. Built for Fortune 1000. Its strength is finding data at rest, not understanding whether that data handling is DPDP-compliant or matching a privacy policy.

   Deep PII discovery
   200+ integrations
   AI classification
   No policy comparison
   No DPDP mapping
   Enterprise-only

4. TrustArc ₹20L–₹60L/yr

   20+ years in privacy · Multi-jurisdiction GRC

   Specialises in privacy impact assessments (PIAs/DPIAs) and multi-jurisdiction compliance. Good for companies operating across GDPR + CCPA + LGPD

simultaneously. Manual questionnaire-based process — not automated scanning. Primarily a process/workflow tool, not a technical scanner.

PIA/DPIA workflows
Multi-jurisdiction
Manual questionnaires
No scanning
No India focus

Dev-focused Tools

5. **Privado.ai ₹8L–₹30L+/yr**

   Most direct competitor · Code scanner + AI agents · VC-backed, founded 2020

   most important competitor to study. Privado scans source code to discover data flows, identifies personal data in code, and maps it to GDPR. Has an open-source version on GitHub. Recently added AI agents that populate privacy assessments from documentation. Also scans websites, mobile apps, and SaaS app APIs.

   What it doesn't do: No DPDP Act mapping whatsoever. No Indian PII patterns (Aadhaar, PAN, Indian phone formats). No consent gap detector comparing policy text vs code. No LLM-powered Q&A on findings. Pricing starts at ₹8L+/yr — unreachable for Indian startups.

   Code scanning
   Data flow maps
   AI agents
   Open-source version
   GDPR-only
   No DPDP
   No consent gap
   No Indian PII

6. **Vanta ₹10L–₹25L/yr**

   GRC + compliance automation · SOC 2, ISO 27001, GDPR

   Automates evidence collection for compliance frameworks like SOC 2, ISO 27001, HIPAA, and GDPR. Integrates with cloud providers, code repos, and SaaS tools to gather compliance evidence automatically. Not a privacy scanner — it checks whether your *controls* are in place, not whether your data handling matches your privacy policy.

   SOC 2 automation
   Evidence collection
   Cloud integrations
   Not a privacy scanner
   No DPDP
   No data flow analysis

7. DataGrail ₹15L–₹40L/yr

   SaaS-native DSAR + consent · Mid-market focus

   Real-time DSAR automation and consent management built for SaaS companies. Integrates with 200+ SaaS apps to identify where user data lives and automate data deletion on request. Good product but focused on the "user rights" side of compliance — no code scanning, no legal section mapping, no India focus.

   DSAR automation
   200+ SaaS integrations
   Consent management
   No code scanning
   No DPDP

India-Focused

8. **Redacto ₹3L–₹10L/yr**

   India-first · DPDP-focused · MeitY consent framework

   One of very few tools actually built for the DPDP Act. Covers consent collection, governance, privacy impact assessments, and vendor risk. Ranked among top consent platforms in MeitY's framework. However, it's primarily a consent and workflow management tool — not a technical scanner. It doesn't scan code, APIs, or databases for actual PII flows or compliance gaps.

   DPDP-native
   MeitY-aligned
   Consent management
   India pricing
   No code scanning
   No PII detection
   No gap detection

9. **Matters.ai ₹15L+/yr (est.)**

   AI-native · Claims "purpose-built for DPDP"

   Markets itself as the only AI-native data security platform purpose-built for India's DPDP compliance — not retrofitted from GDPR. Offers automated data discovery, consent and purpose mapping, and breach detection. Newer entrant with limited third-party validation. No code-level scanning or policy-vs-code gap analysis found in public documentation.

   DPDP-native marketing
   AI data discovery
   Breach detection
   Limited track record
   No code scanning confirmed

10. **Lightbeam ₹50L+/yr**

    Data discovery + real-time mapping · Cloud-focused

    Focuses on data discovery and real-time data mapping across cloud platforms, internal systems, and third-party applications. Has Indian enterprise clients and DPDP coverage claims. However, pricing is enterprise-level and the platform is a data governance tool, not a DPDP-specific compliance checker. No code scanning or NLP policy analysis.

    Real-time data mapping
    Cloud discovery
    Enterprise pricing
    No code scanning
    No policy NLP

11. **Open-source / free options Free**

    PolisisGPT, Privado OSS, OPP-115 Dataset

    Privado has an open-source code scanner (GDPR-focused). OPP-115 is an annotated dataset of privacy policies used in research. PolisisGPT is a research tool

for policy question answering. None of these map to Indian law, support DPDP sections, or perform consent gap detection between code and privacy policy.

Free / academic
Good for research baseline
GDPR-only
No DPDP
Not production tools

Gaps vs PrivacyPilot

- No tool maps findings to DPDP Act sections. Every enterprise tool is built for GDPR or CCPA. Redacto and Matters.ai claim DPDP support but only at the consent/workflow level, not at the level of saying "this API endpoint violates Section 6(1) of the DPDP Act because..."\

- No tool does consent gap detection between policy text and code. Privado scans code and builds data flow maps. OneTrust parses privacy policies. No tool compares the two and identifies where what the code does contradicts what the policy says, your core module.

- No tool recognises Indian PII patterns. None of the scanners are trained on Aadhaar numbers, PAN card formats, Indian phone number patterns, or the "sensitive personal data" definition specific to DPDP (which includes health, financial, biometric, caste, a different list from GDPR's special categories).

- Nothing is affordable for Indian startups. Cheapest credible option is ~₹8L/yr (Privado). Most Indian startups and SMEs operating under DPDP have a ₹0 compliance tool budget. PrivacyPilot targets this gap directly.

- No tool offers LLM-powered Q&A on findings. Every existing tool generates a report. None let a compliance officer ask natural-language questions about specific findings, "can we share this user's data with our analytics partner?", and get a cited, section-specific DPDP answer.

- Privado OSS is your closest technical baseline. You can directly build on and extend it, it's open source, does code scanning and data flow graphs, and you add the DPDP mapper, Indian PII classifier, consent gap detector, and LLM layer on top. That's a defensible architecture decision, not starting from scratch.

PrivacyPilot

The only tool that scans a company's code, APIs, and database schemas against India's DPDP Act 2023, detecting gaps between what the privacy policy claims and what the system actually does, with LLM-generated remediation in plain English. Affordable for Indian startups.
